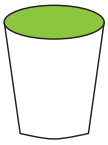
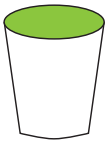
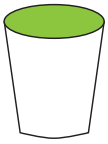
Task 6

Choose five more colors (colored paper) to explore whether color of the jar influences the temperature of its content. Order the colored glasses (1-5) as you think they will be heated the most (mark 5) and at least (1). Write down your predictions and verify it.

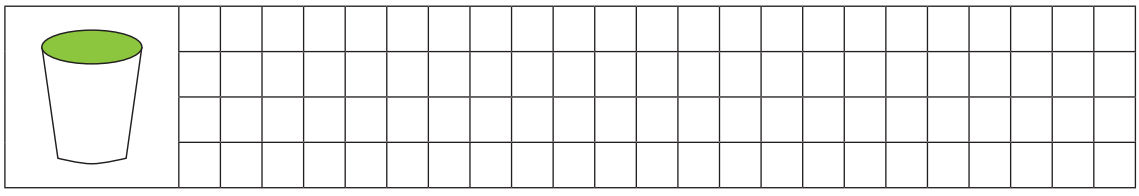
	Prediction	Verification
		
		
		

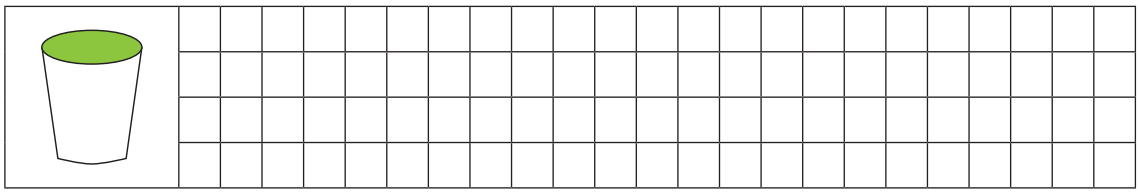


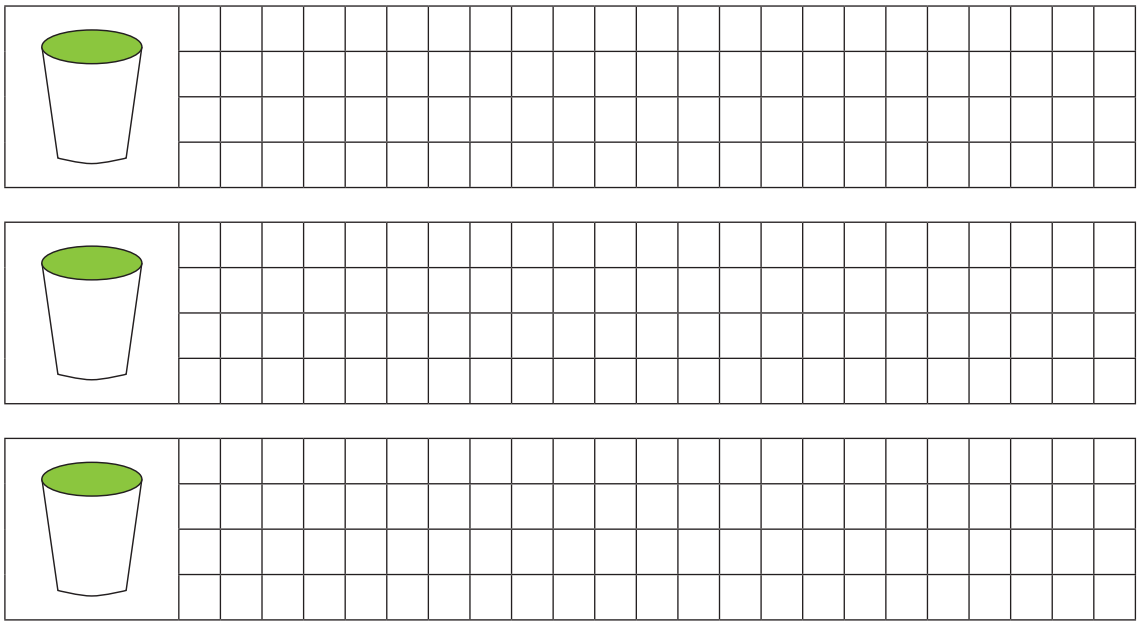




Mark the temperature rise in each table. Repeat the measurement and mark it after every minute. For one degree color one square. Mark each measurement with a different color. Do this as long as the temperature on the thermometers does not stop:







Compare your findings with predictions and try to conclude your investigation:
